

Summary Tables (6 pages total) (Include chart of Project #, Project Title, Investigator, Grant Number, & User Type, % of AUT)

At the beginning of this section, please re-state the Accessible Usage Time (AUT) in annual hours, as introduced in the Justification of Need Section.

Next, insert the following summary tables - a) Research Projects of Major Users and b) Research Projects of Other Users. The tables should have the following columns: User's name, grant number (for NIH awards list the grant numbers such as R01IC123456), brief title of the project, grant start and end dates, and estimated usage in annual hours. If there are multiple Users funded by the same grant, list a total of their estimated usage in annual hours for projects supported by that grant. If applicable, include in this section a separate table to indicate the users' needs for any requested accessory. Do not list users whose annual usage is at the level of 1% or less of AUT.

Following the tables, state:

- i. a total estimated usage time by Users' projects in annual hours,
- ii. the percentage of the estimated usage time devoted to Major Users' NIH-funded projects, and,
- iii. the percentage of the estimated usage time devoted to NIH-funded projects.

Major Users with NIH research funding should use the instrument at the level of at least 35% of the AUT; NIH-funded users (Major and Minor) should use the instrument at the level of 75% of the AUT or higher.

Provide an estimated usage time and AUT for the requested instrument, considering that both the AUT (related to the administration of the instrument) and the expected usage (depending on actual need for the instrument) may be significantly different for different types of instruments and at different institutions.
