HOMer Vrs 4.0 Release Notes (7/28/2005):

This release of HomER marks a major change to the structure of the code. The program is now being released as both a stand-alone version (capable of running without Matlab being installed on the computer) and as a Matlab 7.0 version.

Because of changes and new features added that Matlab 6.5 cannot support, Matlab 7.0 is required to run HomER from within Matlab. The stand-alone should work under windows with no Matlab installed.

See the Detailed User's Guide for new feature details.

System Requirements for Stand-alone operation:

Operating System	Processor	Disc Space	RAM
Windows® XP (SP 1 or 2) Windows® 2000 (SP 3 or 4) Windows® NT (SP 5+)	Pentium III, IV, Xeon, Pentium M, AMD Athlon, Athlon XP, Athlon MP	Matlab Runtime Component: 175Mb HomER: 15Mb -------------------- Total = 190 Mb	256 MB 512 MB (recommended)
